

Enzyplex Powder for Dogs

Digestive enzyme supplement for exocrine pancreatic insufficiency

COMPOSITION

Maltase 14 g/kg

Protease 8 g/kg

Lipase 24 g/kg

ACTIONS

ENZYPLEX is a powdered digestive enzyme supplement to treat Exocrine Pancreatic Insufficiency, where the lack of digestive enzymes creates undigested food in foul smelling faeces, often with diarrhoea.

The digestive enzymes in **ENZYPLEX** break down food elements into digestible components, and improve digestion and absorption of nutrients. **ENZYPLEX** commences digesting the moist food as soon as it is added, and continues to function following digestion. The "carrier" powder is Montmorillonite, a rare earth clay which enhances the function of the enzymes. It slows the passage of nutrients through the intestine, and improves nutrient digestibility. It also alters bacterial fermentation ability in the large bowel, reducing flatulence and improving stool formation, as well as binding bacteria and endotoxins, helping to normalise gut function and prevent diarrhoea.

Sodium bicarbonate acts as a buffer, protecting the enzymes in the stomach and neutralising the hyperacidity in the duodenum. Calcium carbonate assists the buffering, and provides a source of elemental calcium.

Key Features & Benefits:

- * **ENZYPLEX** provides the essential digestive enzymes normally provided by the pancreas.
- * Pancreatic insufficiencies can be relatively common in stressed dogs.
- * **ENZYPLEX** reduces malodorous, semi-fluid faeces and intermittent diarrhoea.
- * **ENZYPLEX** provides more complete digestion of food, and improves nutrient availability and absorption.

INDICATIONS

ENZYPLEX is indicated in conditions which include:

- * Weight loss, increased appetite
- * Malodorous, semi-formed faeces and intermittent diarrhoea produced by insufficient pancreatic digestive enzymes which allows abnormal digestion and overgrowth of bacteria in the bowel. This can be relatively frequent in dogs.
- * Inappropriate or deficient diets, where improved nutrient conversions will enhance nutrition
- * Old, stressed, ill, fatigued, and convalescent dogs
- * High performance athletic animals with high nutrient demands

DOSAGE AND ADMINISTRATION

Mix well with food. If food is dry, dampen with warm water after mixing. Allow to stand for 10 - 15 minutes to allow pre-digestion to commence before feeding.

One measure (6 g) mixed through each 300 g of dry food or each 700 g of tinned food, meat or stew, daily.

ENZYPLEX is safe to use with all Nature Vet products.

PRESENTATION

750 g Tub

STORAGE

Store below 25 °C (Air Conditioning). Store in dry place. Replace lid tightly after use.

AVAILABILITY

For General Sale (APVMA 37556)

NOTES

Digestive upsets can be quite common in dogs, and can relate to simple factors such as too much fat in a meal, stress of travelling, training and racing, inadequate diets, and even apartment living in many breeds of dogs.

If products such as PEPTOSYL or ENZYPLEX do not give a response rapidly, seek veterinary advice immediately.
